Roadtec ConExpo 08 Preview

The Roadtec booth will showcase the company's entire product line from cold planers and soil stabilizers to Shuttle Buggy® MTV's and pavers. The new generation SX-7 soil stabilizer will have its ConExpo debut and will feature many enhancements, including a fully enclosed cab. The cold planer line will be represented by the enhanced RX-900, which is the highest horsepower machine available anywhere, and also with the most compact model in the line, the RX-400, which is Roadtec's new 1-meter cold planer. A new segmented drum design will be shown on the RX-900. Pavers with many new features, including higher horsepower engines, lower noise emissions, and re-designed operator stations will be shown. The company also plans to roll out a major GPS-technology assisted service feature, which will be a component of the new Roadworks™ customer care service program.

Roadtec will exhibit in the Central Hall of the Las Vegas Convention Center, booth number 5357.
